Learning, Teaching, Training Activity

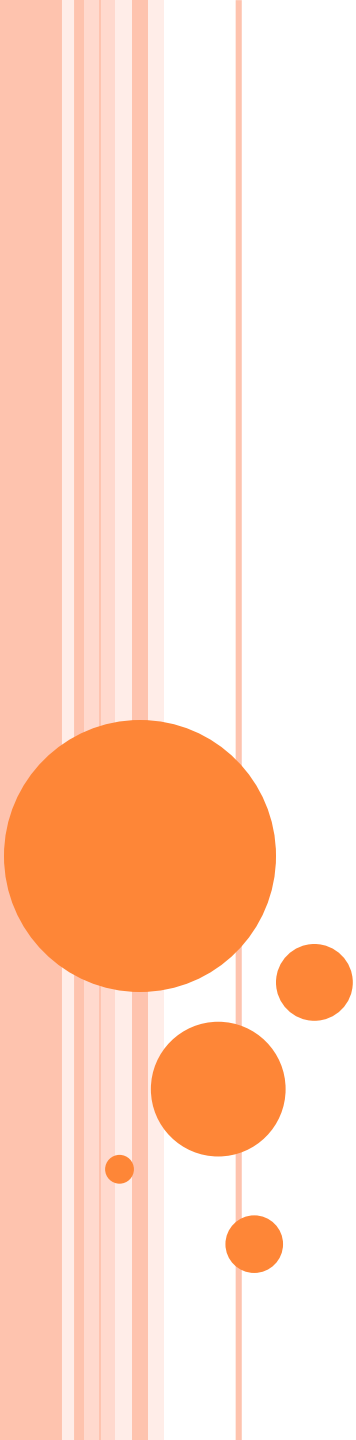

Ankara ,Turkey

23rd-27th October 2017

EVALUATION OF CYBERBULLYING QUESTIONNAIRE RESULTS

GENERAL CHARACTERIZATION OF PARTICIPANTS

GRADE	FREQUENCY	PERCENTAGE
7 TH	140	50,00%
8 TH	140	50,00%
<u>TOTAL</u>	<u>280</u>	
GENDER	FREQUENCY	PERCENTAGE
GIRLS	141	50,36%
BOYS	139	49,64%
<u>TOTAL</u>	<u>280</u>	

PARENTS' ACADEMIC QUALIFICATIONS

	MOTHER		FATHER	
	Frequency	Percentage	Frequency	Percentage
Literate	5	1,79%	4	1,43%
Inliterate	11	3,93%	38	13,57%
Primary	59	21,07%	48	17,14%
Secondary	49	17,50%	117	41,79%
High School	111	39,64%	68	24,29%
University	43	15,36%	5	1,79%
Master Degree- Doctorate	2	0,71%	4	1,43%

Social-economic situation of parents

	Frequency	Percentage
low class	13	4,64%
middle class	231	82,50%
high class	36	12,86%
<u>TOTAL</u>	<u>280</u>	

How often do you go online?

Web sites that you often surf on the net

THE RESULTS

At the end of the analyzes that were made in SPSS such as t-test, F test, Scheffe test, Anova analyze, Mann Whitney U test, these results were reached;

1. There is no statistically significant relationship between the rate of being cyberbullied and the gender.

$t(278)=2.324, p>.01$

2. There is no statistically significant relationship between the rate of being cyberbullied and the grade.

$t(278) = .994, p > .01$

3. There is statistically significant relationship between the rate of being cyberbullied and social-economic situation of parents.

$F(2.277)=5.854, p<.05$

$p=0.003<0.05$

4. There is statistically significant relationship between the rate of being cyberbullied and the education level of mothers.

$F(6.273)=2.450, p<.05$

$p=0.025<0.05$

5. There is no statistically significant relationship between the rate of being cyberbullied and the education level of fathers.

$F(5.274)=1.293, p<.05$

$p=0.267<0.05$

6. There is statistically significant relationship between the rate of being cyberbullied and the frequency of entering the internet.

$F(5.274)=1.293, p<.05$

$p=0.267<0.05$

7. There is no statistically significant relationship between the rate of being cyberbullied and the frequency of the pages visited on the internet.

$F(4.275)=1.451, p<.05$

$p=0.217<0.05$
